Continuation of 3. NOTE: The proposed amendment specifically equates the bit rate of the separated signal light with one of the plurality of signal lights that make up the TDM signal; however, the separated signal light of the combination is already equal to one of a plurality of signal lights that make up the 320 Gbps signal of the combination. Each of the plurality of signal lights in AAPA that made up the original 160 Gbps signal was already disclosed as 10 Gbps. Although Mikkelsen's own transmitter-side 320 Gbps signal is "assembled using a base rate of 20 Gb/s", Mikkelsen's transmitter is not applied in the combiation. The relevant teaching from Mikkelsen is the receiver-side demultiplexing of a 10 Gbps signal from a 320 Gbps signal (in context relative to the original AAPA 160 Gbps signal) using a 40 Gbps modulator followed by 10 Gbps modulator.
